## INTRODUCTION

Before the author describes more about the issues of the angel who has a function as a database, which means angel noted human deeds, first author of seeking forgiveness from God.

The factors that depicts an angel has a function as a database taken from the verses:

1. *"...then We sent to her Our spirit, then he changed being human in front of her (in the form of) a perfect man." (Maryam: 19:17)*
2. *"And all things have We recorded in a book" (An Naba ': 78:29)*
3. *"...when the two angels record the deeds, one sitting on the right and the others sat on the left." (Qaf: 50:17)*
4. *"...And issued him a book he encountered the open on the Day of Judgement" (Al-Israa ': 17:13)*
5. *"Read your book, suffice it yourself at this time as a reckoner against you" (Al-Israa ': 17:14)*

Deoxyribonucleic acid is the tool I use to analyze the factors that describe the angel has a function as a database, which means angel recorded human deeds.

## HYPOTHESIS

Here I propose the hypothesis, there are factors that describe the angel has a function as a database, a place to store human deeds.

## DEOXYRIBONUCLEIC ACID

Deoxyribonucleic acid (DNA) as a tool used by the author to analyze the factors that describe the angel has a function as a database, a place to store human actions. This DNA is the result of the discovery of Francis Harry Compton Crick, James Watson and Maurice Hugh Frederick Wilkins. They received the Nobel Prize in Physiology or Medicine for his discovery in 1962.

DNA (deoxyribonucleic acid) is the genetic information storage has dual structure that forms a double helix and a polynucleotide containing macromolecules composed of polymers of nucleotides repeated. This nucleotide is composed of folate, 5-carbon sugar and one of the nitrogenous bases. Nitrogen base is Guanine (G), adenine (A), Cytocine (C) and Thymine (T). For example, one example of a nucleotide is folate, 5-carbon sugar and Thymine (T).

Guanine (G) is composed of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) containing 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

## ANGELS CHANGED BEING HUMAN

*"... then We sent to her Our spirit, then he changed being human in front of her (in the form of) a perfect man." (Maryam: 19:17)*

Based on the molecular structure of nucleic acids or deoxyribonucleic acid (DNA) is a human being composed of 32.20% carbon atoms, 25.43% nitrogen, 6.78% oxygen atoms and 35.59% hydrogen atoms. The carbon atoms, nitrogen, oxygen and hydrogen are widely available around us and in the atmosphere. These atoms are the raw material for the manufacture of humans, animals, fungi, amoeba, plants, bacteria and archaea.

We can say that humans are built almost a third of the carbon atoms, a quarter of the nitrogen atoms, almost one-tenth of the oxygen atoms and more than a third of the hydrogen atoms in which all of the atoms are available all around us, in the soil and in the atmosphere.

Now if we base it on the verse Maryam: 19:17 above mentioned that the angels *"... changed being human in front of her (in the form of) a perfect man"*, then we can say that the angel's body contains elements of the same atoms as atomic elements that build the human body. So the angel's body contains carbon, nitrogen, oxygen and hydrogen.

If we make an analysis of the atoms present in the human body, the atoms into building materials of the human body is not lost. If the man was dead and buried his body was taken away the earth to decay or decomposition process through the help of living organisms such as fungi, bacteria, grubs and ants. In this decay process carbon atoms and oxygen atoms to form carbon dioxide or carbonic acid substances. Then substances carbonic acid is absorbed by plants and changed into oxygen and glucose through the process of photosynthesis with the help of sunlight, water and chloroplasts. Chloroplasts found in green plant parts. Glucose is used as food by plants, while the oxygen is used for groceries through the process of respiration by humans and animals.

In this decay process, the body of a dead man is transformed into ammonia. Furthermore, ammonia is converted to nitrite by bacteria nitrosoma. Then nitrite is converted into nitrate by bacteria nitrobaktor. Finally nitrate through denitrification process back into nitrogen and rises into the atmosphere. So the carbon, nitrogen, oxygen and hydrogen that become building materials dead human body is back out and gathered around us and there are rising up into the atmosphere. Furthermore, the atoms will be used again to be the raw material of humans and other living organisms that are new.

Likewise, carbon, nitrogen, oxygen and hydrogen into building materials in the body of an angel is not lost. Angels do not experience death as a human, but an angel of life through the transformation process starts from the carbon atoms into nitrogen atoms then nitrogen atoms into oxygen atoms and oxygen atoms back into carbon atoms. The transformation process of the carbon atoms back into a carbon atom takes more than 31,240,000 years.

## ANGELS RECORDED IN HUMAN DEOXYRIBONUCLEIC ACID

*"And all things have We recorded in a book" (An Naba ': 78:29)*

*"...when the two angels record the deeds, one sitting on the right and the others sat on the left." (Qaf: 50:17)*

*"...And issued him a book he encountered the open on the Day of Judgement" (Al-Israa ': 17:13)*

*"Read your book, suffice it yourself at this time as a reckoner against you" (Al-Israa ': 17:14)*

Let us trace behind the curtain *"... when two angels recorded deeds, one sitting on the right and the others sat on the left" (Qaf: 50:17) "And all things have We recorded in a book" (An Naba ': 78:29)*

Robert W. Holley, Har Gobind Khorana and Marshall W. Nirenberg were discovered on the interpretation of the genetic code and its function in protein synthesis and RNA (ribonucleic acid) which have a role to synthesize proteins and convey the information stored in DNA. They received the Nobel Prize in physiology and medicine field on the research results in 1968. According to their genetic code or codon present in the molecular structure of nucleic acids can be used among others to examine the development of all kinds of organisms living in this world since the beginning of the emergence of archaea, bacteria, plants, amoeba, fungi, animals to humans until now.

Based on the verses of Qaaf: 50:17 and An Naba': 78:29 above and associated with deoxyribonucleic acid, it would appear to us that it is actually an angel whose body is built from carbon atoms, nitrogen, oxygen and hydrogen contained in the DNA of the human body. This means that what is called the angel of human deeds recorded is actually because of all the deeds and human development recorded and stored in the genetic code that is made of the arrangement of atoms of carbon, nitrogen, oxygen and hydrogen. Because the angel's body is built also from the carbon, nitrogen, oxygen and hydrogen, then this means that the angel itself noted human deeds stored in DNA.

Then, if we examine *"... And issued him a book he encountered the open on the Day of Judgement" (Al-Israa ': 17:13) "Read your book, suffice it yourself at this time as a reckoner against you" (Al-Israa ': 17: 14)*

It depicts an angel that has a function as an open database returns all records concerning human deeds are stored in deoxyribonucleic acid. Based on the deoxyribonucleic acid contained in the body of an angel can be seen all human deeds from birth until death.

So based on deoxyribonucleic acid contained in the body of an angel, God could reopen and give punishment to the man for what he had done during his life.

This is the secret behind the veil verse Al Israa ': 17: 13-14 above, which is actually an angel who has a function as a database, a place to store all human deeds. This is because there are similarities in the arrangement of atoms of carbon, nitrogen, oxygen and hydrogen atoms making up the body respectively.

## CONCLUSION

Based on the description above, we can conclude there are factors that describe the angel has a function as a database, a place to store all human deeds.

An angel whose body is built from carbon atoms, nitrogen, oxygen and hydrogen contained in the DNA of the human body. This means that what is called the angel of human deeds recorded is actually because of all the deeds and human development recorded and stored in the genetic code that is made of the arrangement of atoms of carbon, nitrogen, oxygen and

hydrogen. Because the angel's body is built also from the carbon, nitrogen, oxygen and hydrogen, then this means that the angel itself noted human deeds stored in DNA.

Angels who had the element carbon atoms, nitrogen atoms, oxygen atoms and hydrogen atoms are the same as the element carbon atoms, nitrogen atoms, oxygen atoms and hydrogen atoms are there in the human body. Therefore where there are humans there is an angel who records all human deeds.

The angel who has a function as a database open back all records concerning human deeds are stored in deoxyribonucleic acid. Based on the deoxyribonucleic acid contained in the body of an angel can be seen all human deeds from birth until death.
