ABSTRACT

Before the author writes about Adam is a symbol of the unity of Allah's spirit, the author first asks forgiveness from Allah SWT. Here the author tries to open the veil covering the secret that Adam is a symbol of the unity of Allah's spirit, based on deoxyribonucleic acid (DNA).

There are several verses that reveal Allah's secrets about Adam is a symbol of the unity of Allah's spirit, namely the following verses:

"He created you from one self and from him He created his wife, so that he would be pleased with her...(Al A'raaf: 7:189)

"And indeed We created human from the essence of soil. (Al Mu'minuun: 23: 12)

"So when I have perfected the body of Adam and breathed into Adam my spirit, then you will fall down and prostrate to him." (Shaad: 38: 72)

"Then He perfected the body and breathed into Adam His spirit and He made for you hearing, sight and heart, you're a handful, be thankful. (As Sajdah : 32: 9)

"And We said: "O Adam, inhabit this paradise and your wife, and eat of its abundant and good food wherever you like, and do not approach this tree, which will cause you to be one of the wrongdoers. (Al Baqarah : 2: 35)

"So Maryam created a veil from them, then We sent Our spirit to Maryam, then Our spirit incarnated before Maryam, the perfect human. (Maryam 19: 17)

"Who has created the seven skys in layers. You never see in the creation of the Most Gracious God anything that is not balanced. So look again and again, do you see something that is not balanced? (Al Mulk: 67: 3)

In an effort to reveal Allah's secret about Adam is a symbol of the unity of Allah's spirit, the author uses the basis of deoxyribonucleic acid.

HYPOTHESIS

Here the author proposes hypothesis Adam is a symbol of the unity of Allah's spirit, based on Deoxyribonucleic acid (DNA)

PHOTON

Photons are elementary particles of the boson type and carriers of electromagnetic interactions.

QUARKS

If we want to know quarks then we pay attention to one of the hydrogen atoms which is a building element of the human body, animals, plants and fruit as well as inanimate objects. Then we open the

body of the hydrogen atom, we will find one electron and one proton nucleus. Next, if this proton is split, we will find two up quarks and one down quark. Where these three quarks are combined with a gluon.

DEOXYRIBONUCLIC ACID (DNA)

DNA is a storehouse of genetic information that has a double structure that forms a double helix and contains polynucleotide macromolecules which are composed repeatedly of nucleotide polymers. This nucleotide consists of folate, a 5-carbon sugar and one of the nitrogen bases. The nitrogen bases are Guanine (G), Adenine (A), Cytosine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine(A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytosine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. 5 carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

Based on human deoxyribonucleic acid (DNA), it consists of 32.20% carbon atoms, 25.43% nitrogen atoms, 6.78% oxygen atoms and 35.59% hydrogen atoms. Where carbon, nitrogen, oxygen and hydrogen atoms are widely available around us and in the atmosphere.

ADAM IS A SYMBOL OF THE UNITY OF ALLAH'S SPIRIT

So now, we are still concentrating our minds on uncovering the secrets contained behind the verses: *"...We created human from the essence of soil. (Al Mu'minuun: 23: 12) "He created you from one self.. (Al A'raaf: 7:189) "...I breathed into Adam my spirit...(Shaad : 38: 72)*

Well, it turns out here, Allah has revealed the true secret about how Adam was created with the declaration *"He created you from one self...(Al A'raaf: 7:189) "...I breathed into Adam my spirit...(Shaad : 38: 72)*

Well, now, the question arises,

What does Allah actually mean by *"...one self...(Al A'raaf: 7:189)*?

Apparently, the secret of *"...one self...(Al A'raaf: 7:189)* is in the secret behind the verse: *"...He... breathed into Adam His spirit and He made for you hearing, sight and heart...(As Sajdah : 32: 9)*

So it turns out, *"...my spirit...(Shaad: 38: 72)* or *"...Allah's spirit...(Shaad: 38: 72)* or *"...His spirit...(As Sajdah: 32: 9)* is Deoxyribonucleic acid (DNA) which is the source of the formation of *"...hearing, sight and heart...(As Sajdah: 32: 9)*

So, actually, what Allah means by *"...one self...(Al A'raaf: 7:189)* is Deoxyribonucleic acid (DNA) which contains hydrogen atoms, carbon atoms, nitrogen atoms and oxygen atoms.

Or in other words, Adam's creation from *"...one self...(Al A'raaf: 7:189)* is from hydrogen atoms, carbon atoms, nitrogen atoms and oxygen atoms.

Where the creation of Adam is the same as the creation of *"...seven skys...(Al Mulk: 67: 3)* which begins with Allah's energy, which forms quarks, then quarks, forming hydrogen atoms, carbon atoms, nitrogen atoms, oxygen atoms and other atoms, until they become *"...seven skys...(Al Mulk : 67: 3)* like now.

So, the creation of Adam and his wife was a chain of creation "...seven skys...(Al Mulk: 67: 3) which continues to this day.

So, in fact, Adam is a symbol of the union of "...my spirit...(Shaad: 38: 72) or "...Allah's spirit...(Shaad: 38: 72) or "...His spirit...(As Sajdah: 32: 9).

Or in other words, "...my spirit...(Shaad: 38: 72) or "...Allah's spirit...(Shaad: 38: 72) or "...His spirit...(As Sajdah: 32: 9), which forms Deoxyribonucleic acid (DNA), where human DNA consists of 32.20% carbon atoms, 25.43% nitrogen atoms, 6.78% oxygen atoms and 35.59% hydrogen atoms.

Well, DNA is in the sperm from the father's side and in the egg from the mother's side.

So, now to look for traces of human creation from "...one self...(Al A'raaf: 7:189), we can use the genetic code contained in the molecular structure of nucleic acid or DNA (Deoxyribonucleic acid) and through RNA (Ribonucleic acid) which has a role in synthesizing proteins and carrying out catalytic activities.

This genetic code is used by almost all types of living organisms, from archaea, bacteria, plants, amoebas, fungi, animals to humans today. Because the genetic code is universal, the same genetic code applies to all types of living organisms.

With this similarity in genetic code, we can say that humans living today have similarities in their genetic code with all other types of living organisms.

In other words, humans, including Adam and his wife, have a family relationship with all types of living organisms, from archaea, bacteria, plants, amoeba, fungi to animals.

The first living organisms that appeared on earth, several billion years ago, passed on their characteristics to their descendants.

Examples of this genetic code or codon include CAA and CAG which are amino acids or glutamine amino acids.

The existence of this familial relationship between humans and all other types of living organisms proves the truth of Allah's secret behind the verse "*He created you from one self...*(Al A'raaf: 7:189). Where Allah created humans from one self, meaning from the start a type of living organism that only has one cell.

This is empirical evidence, how Adam was created in "...paradise...(Al Baqarah: 2: 35), where Adam is a symbol of the union of "...my spirit...(Shaad: 38: 72) or "...Allah's spirit...(Shaad: 38: 72) or "...His spirit...(As Sajdah: 32: 9), which almost the majority of people in the world, including almost all Muslims in the world, still do not understand.

Meanwhile, "...paradise...(Al Baqarah: 2: 35), describes life in the form of "...my spirit...(Shaad: 38: 72) or "...Allah's spirit...(Shaad: 38: 72) or "...His spirit...(As Sajdah: 32: 9), which is in the form of a building of carbon atoms, nitrogen atoms, oxygen atoms and hydrogen atoms.

So, "...paradise...(Al Baqarah: 2: 35) is not a place "...my spirit...(Shaad: 38: 72) or "...Allah's spirit...(Shaad: 38: 72) or "...His spirit...(As Sajdah: 32: 9), which has a body structure, like the body of humans, animals, which consists of bones, flesh and blood.

Rather, "...paradise...(Al Baqarah: 2: 35) is the place of"...my spirit...(Shaad: 38: 72) or "...Allah's spirit...(Shaad: 38: 72) or "...His spirit...(As Sajdah: 32: 9), which is in the form of a building of carbon atoms, nitrogen atoms, oxygen atoms and hydrogen atoms.

Well, because "...paradise...(Al Baqarah: 2: 35) is on earth, when "...Allah...breathed into Adam His spirit...(As Sajdah: 32: 9) in "...paradise...(Al Baqarah: 2: 35), then after "...Allah perfected the body...of Adam...which had hearing, sight and heart...(As Sajdah: 32: 9), Adam and his wife, who had bodies, consisting of bones, flesh and blood, had to come out of "...paradise...(Al Baqarah: 2: 35)

Well, this is the secret of Allah, which is not understood by most people, including most Muslims, in the world.

CONCLUSION

Based on the description above we can conclude that the secrets contained behind the verses: "...We created human from the essence of soil. (Al Mu'minuun: 23: 12) "He created you from one self...(Al A'raaf: 7:189) "...I breathed into Adam my spirit...(Shaad : 38: 72)
