## ABSTRACT

First, by asking forgiveness from Allah SWT, here I am trying to open the signs of the greatness of Allah SWT regarding Allah's challenge to humans and the jinn to cross the sky and the earth based on photons, quarks and the molecular structure of nucleic acid or deoxyribonucleic acid (DNA)

In the Koran, a verse is found which is the key to unlocking the secrets of Allah's challenge to humans and the jinn to cross the sky and the earth, namely the verse:

*"O congregation of jinn and humans, if you are able to penetrate (cross) the corners of sky and earth, then pass, you cannot penetrate it except by power. (Ar Rahmaan: 55: 33)*

In an effort to open the veil of Allah's challenge to humans and the jinn to cross the sky and the earth, I based on photons, quarks and deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

## HYPOTHESIS

Here I propose the hypothesis that humans and jinn are able to cross the sky and the earth when viewed from the point of view of photons, quarks and Deoxyribonucleic acid (DNA)

## DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information which has a double structure that forms a double helix and which contains polynucleotide macromolecules which are arranged repeatedly from nucleotide polymers. These nucleotides are composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

**Photons** are elementary particles of the boson type and are carriers of electromagnetic interactions.

To find out a **quark**, we consider one of the hydrogen atoms which is the building block for the human body, animals, plants and fruits and inanimate objects. Then we open the body of the hydrogen atom, we will find an electron and a proton nucleus. So if this proton is split, then we will find two upper quarks and one lower quark. Where these three quarks are combined with gluons.

## JINN AND HUMAN ARE THE SAME CONTAINING OXYGEN ATOMES, HYDROGEN ATOMES, NITROGEN ATOMES AND CARBON ATOMES

Now we are digging together the secret behind the verse *"O congregation of jinn and humans, if you*

*are able to penetrate (cross) the corners of sky and earth, then pass, ... (Ar Rahmaan: 55: 33)*

So who is a jinn?

Jinn is a human being who has in his body an oxygen atom, a hydrogen atom, a nitrogen atom and a carbon atom. So because the jinn are humans, then Allah challenges humans and these jinn to cross the heavens and the earth. It is a challenge from Allah who is also a tribute to humans and the jinn to cross the heavens and the earth.

Why does Allah challenge humans and jinn?

Because Allah has given minds to humans and jinn. Armed with this mind, Allah has given freedom to humans and the jinn to be used to solve how to cross sky and earth.

### **TO CROSS THE SKY AND THE EARTH USING SULTAN (POWER)**

Then we dig deeper to reveal the secret in the verse: *"... you cannot penetrate it except by power. (Ar Rahmaan: 55: 33)*

So now what is this *"power"* or sultan?

The answer is *"power"* or the sultan is science and technology. So humans and jinn, if they use science and technology, will be able to cross the heavens and the earth. Until now, humans have indeed been able to traverse the planets in our solar system.

So actually the challenge from Allah to humans and the jinn to cross the sky and the earth can be implemented.

### **ONCLUSION**

Based on the description above, we can conclude that the secret behind the verse

*"O congregation of jinn and humans, if you are able to penetrate (cross) the corners of sky and earth, then pass, ... (Ar Rahmaan: 55: 33)*

Who is a jinn?

Jinn is a human being who has in his body an oxygen atom, a hydrogen atom, a nitrogen atom and a carbon atom.

So because the jinn are humans, then Allah challenges humans and these jinn to cross the sky and the earth.

It is a challenge from Allah who is also a tribute to humans and the jinn to cross the heavens and the earth.

Why does Allah challenge humans and jinn?

Because Allah has given minds to humans and jinn. Armed with this mind, Allah has given freedom to humans and the jinn to be used to solve how to cross heaven and earth.

Then we open the secret in the verse: *"... you cannot penetrate it except by force. (Ar Rahmaan: 55: 33)*

Now what is this "power" or sultan?

The answer is "*power*" or the sultan is science and technology. So humans and jinn, if they use science and technology, will be able to cross the sky and the earth.

Until now, humans have indeed been able to traverse the planets in our solar system.

So actually the challenge from Allah to humans and the jinn to cross the sky and the earth can be implemented.

It shows that with science and technology, sky and earth can be crossed by humans and jinn.
