ABSTRACT

Before I write about Allah's secret problem about angels fighting, I first ask Allah SWT for forgiveness. Here I try to open the veil that covers Allah's secret about angels fighting from the point of view of the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

There are several verses that become tools for opening Allah's secret about angels participating in war, namely:

"Indeed there is a sign for you in the two groups who have met (fighting). One group is fighting in the way of Allah and the other (group) is infidels who with their eyes see (as if) the Muslims are twice their number. Allah strengthens them. with His help, whom does He want. Verily in this there is a lesson for those who have the eyes of the heart. (Ali 'Imran: 3:13)

"Yes (enough), if you are patient and alert, and they come to attack you immediately, Allah will help you with five thousand angels wearing signs. (Ali 'Imran: 3: 125)

"(Remember), when you asked your Lord for help, then He permitted you:" Behold, I will bring reinforcements to you, with a thousand angels who come successively. " (Al Anfaal : 8: 9)

In an effort to open the veil of Allah's secret about angels participating in war, I use the basis of deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESIS

Here I propose the hypothesis that angels are humans from a basic point of view of Deoxyribonucleic acid (DNA).

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information which has a double structure that forms a double helix and which contains polynucleotide macromolecules which are arranged repeatedly from nucleotide polymers. These nucleotides are composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

ANGELS ARE HUMANS AND FOLLOWERS WAR

Let us explore the secret behind the verse: *"... and they come to attack you immediately, surely Allah will help you with five thousand angels wearing signs. (Ali 'Imran: 3: 125)* and the verse: *"... . One group is fighting in the way of Allah and (a group) others are infidels who with their eyes see (as if) the*

Muslims twice their number ... (Ali 'Imran: 3:13) and the verse: "... Verily, I will bring reinforcements to you, with a thousand angels who have come successively." (Al Anfaal: 8: 9)

It turns out that here it is clearly illustrated that angels are humans like us. Angels join the war and of course also kill and kill.

THE ANGEL'S WING IS THE ATOM OF THE ANGEL

Now, angels participate in war with humans, humans cannot fly, while angels are just like humans. How can angels fly when angels are no different from humans?

This is the secret, namely the atomic atoms in the body of an angel who flies to meet the layer of light of Allah as stated in the verse: *"... Who makes angels as messengers (to take care of various kinds of affairs) who have wings, each (some) two, three and four ... (Faathir: 35: 1)* and in the verse: *"The angels and Jibril ascend (to face) to God in a day whose levels are fifty thousand years." (Al Ma'aarij: 70: 4)*

So those who fly are the angel atoms and Jibril atoms that meet the waves of Allah's light layer.

IN THE BODY OF THE ANGEL THERE ARE OXYGEN ATOMES, HYDROGEN ATOMES, CARBON ATOMES AND NITROGEN ATOMES

Because angels are like our humans, the angel's body contains oxygen atoms, hydrogen atoms, carbon atoms and nitrogen atoms, just like in the human body.

CONCLUSION

Based on the description above, we can conclude that angels are humans like us. Angels join the war and of course also kill and kill. Angels go to war with humans, humans cannot fly, while angels are like humans.

How can angels fly when angels are no different from humans?

The secret is that the atoms in the body of the flying angel meet the layers of Allah's light as stated in the verse: *"... Who makes angels as messengers (to take care of various affairs) who have wings, each (some). two, three and four ... (Faathir: 35: 1)* and in the verse: *"The angels and Jibril rose (to face) to God in a day whose levels were fifty thousand years." (Al Ma'aarij: 70: 4)*

So those who fly are the angel atoms and Jibril atoms that meet the waves of Allah's light layer.
