ABSTRACT

Previously, I asked for forgiveness from Allah SWT. Here I am trying to remove the veil that covers the chest related to human understanding and knowledge from the point of view of the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

There are several verses in the Quran that write down this chest problem, namely the verses of the verse:

"Actually, Al Quran is the real verses in the chest of those who are given knowledge. And no one can deny Our verses except those who do wrong. (Al 'Ankabuut: 29: 49)

"And your Lord knows what is hidden (in) their breasts and what they declare. (Al Qashash: 28: 69)

"Then have they not walked the earth, then they have a heart with which they can understand or have ears with which they can hear? For in fact it is not the eye that is blind, but the blind one, it is the heart that is in the chest. (Al Hajj: 22:46)

Where in an effort to remove the veil that covers the chest which is associated with human understanding and knowledge, I use a device called deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESIS

Here I propose a hypothesis, what is meant by human understanding and knowledge that the brain is based on Deoxyribonucleic acid (DNA)?

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information which has a double structure that forms a double helix and which contains polynucleotide macromolecules which are arranged repeatedly from nucleotide polymers. These nucleotides are composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

CHEST IS JUST A SYMBOL

If we now open the secret that is in the verse: *"... Al Quran is the real verses in the chest of those who are given knowledge ... (Al 'Ankabuut: 29: 49)* and the verse: *"... what is hidden (in) their chest ... (Al Qashash: 28: 69)* and the verse: *"... but who is blind, is the heart that is in the chest. (Al Hajj: 22:46)*

Now clearly and plainly open that the chest is only a symbol. Why?

Because the chest itself is a part of the human body that has no function related to understanding, thinking, memory, feeling.

THE CHEST IS THE SYMBOL AND SYMBOL OF THE BRAIN

Then we dig into the verse: *"... they have a heart with which they can understand ... (Al Hajj: 22:46)*

It turns out that the liver or heart or liver is a part of the body that is in the chest, where the function of the liver or heart or liver physiologically is to destroy toxins in the blood, produce protein for blood clotting and help the digestive process through the production of bile. But psychologically the heart or heart or liver doesn't have any role.

That's why the chest in which there is a part of the body, the heart or heart or liver is a symbol of the human brain. Why?

Because signals from one of the limbs are first sent electronically to the spinal cord. In this spinal cord nerve cells are connected to the following nerve cells with the help of synapses. Synapse is the point where nerve cells come together and where signals coming from that limb are converted into chemical transmitters that prepare the following nerve cells to transmit signals. Then the signal is sent further in electronic form to the brain.

Then the signals coming from the limbs are filtered, controlled and analyzed by the brain before being returned to the limbs.

For example, one regarding behavior and belief in Allah, whether the behavior is good or bad is adjusted to the experience gained by one of them through teaching. Where this experience is one of which is obtained from learning about Islam.

All experiences regarding Islamic studies are stored properly in the memory which is called the hippocampus in the brain.

So the signals coming from the brain have gone through filtering, controlling and analyzing whether the behavior is good or bad according to the experiences it has acquired and has been stored in the hippocampus.

This is the secret behind the verse: *"Actually, Al Quran is the real verses in the chest of those who are given knowledge ... (Al 'Ankabuut: 29: 49)*

So people who are given knowledge, which means people who have knowledge about Allah that has been stored in the hippocampus in the brain. Knowledge of Allah is what filters and controls human behavior and drives.

Now it has been revealed that the chest is the brain.

CONCLUSION

Based on the description above, we can conclude that it is clearly and clearly open that the chest is only a symbol. The chest itself is a part of the human body that has no function related to understanding, thinking, memory, feeling. The liver or heart or liver is the part of the body that is in the chest, where the function of the liver or heart or liver physiologically is to destroy toxins in the

blood, produce protein for blood clotting and help the digestive process through the production of bile.

But psychologically the heart or heart or liver doesn't have any role. The chest in which there is a part of the body, the heart or heart or liver is a symbol of the human brain. Because signals from one of the limbs are first sent electronically to the spinal cord. In this spinal cord nerve cells are connected to the following nerve cells with the help of synapses. Synapse is the point where nerve cells come together and where signals coming from that limb are converted into chemical transmitters that prepare the following nerve cells to transmit signals. Then the signal is sent further in electronic form to the brain.

Then the signals coming from the limbs are filtered, controlled and analyzed by the brain before being returned to the limbs. Regarding behavior and belief in Allah, whether that behavior is good or bad is adjusted to the experience gained by one of them through teaching. Where this experience is one of which is obtained from learning about Islam.

All experiences regarding Islamic studies are stored properly in the memory which is called the hippocampus in the brain. Signals coming from the brain have gone through filtering, controlling and analyzing whether the behavior is good or bad according to the experiences it has acquired and has been stored in the hippocampus

This is the secret behind the verse: *"Actually, Al Quran is the real verses in the chest of those who are given knowledge ... (Al 'Ankabuut: 29: 49)*
