## **ABSTRACT**

First of all, by asking forgiveness from Allah SWT, here I try to reveal the signs of the greatness of Allah SWT regarding the secrets of humans who do not live and do not die in hell from the point of view of photons, quarks and the molecular structure of nucleic acids or deoxyribonucleic acid (DNA).

The signs of Allah's greatness regarding the secrets of humans who do not live and do not die in hell are found in one verse which I consider to be the key to unlocking Allah's secrets about humans who do not live and do not die in hell, namely the verse:

*"Indeed, whoever comes to his Lord in a state of sin, then verily for him is Hell. He does not die in it nor does he (also) live. (Thaahaa: 20: 74)*

In an effort to unveil the greatness of Allah SWT regarding the secrets of humans who are not living and do not die in hell I use the basis of photons, quarks and the molecular structure of deoxyribonucleic acid (DNA).

## **HYPOTHESIS**

Here I propose the hypothesis of humans who do not live and do not die in hell because there are oxygen atoms, nitrogen atoms, hydrogen atoms and carbon atoms when viewed from photons, quarks and the molecular structure of nucleic acids or deoxyribonucleic acid (DNA).

## **DEOXYRIBONUCLEIC ACID (DNA)**

DNA is a repository of genetic information which has a double structure that forms a double helix and which contains polynucleotide macromolecules which are arranged repeatedly from nucleotide polymers. These nucleotides are composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

## **IN HELL CONTAINS HYDROGEN ATOM AND HELIUM ATOM**

Let us dig from what is written in the verse: *"... behold, hell for him Jahannam. He does not die in it and does not (also) live. (Thaahaa: 20: 74)*

Now, we dig deeper *"... He does not die in it nor (nor) is alive. (Thaahaa: 20: 74)*

Now why do humans who enter hell neither live nor die?

Because hell contains hydrogen atoms, when two hydrogen atoms collide due to nuclear fusion where one of the protons is converted into a neutron.

In each hydrogen atom consists of a proton and an electron.

Furthermore, when atoms containing one proton and one neutron collide with hydrogen which has one proton it gives birth to helium which contains two protons and one neutron and the most intense it gives rise to gamma rays of photons.

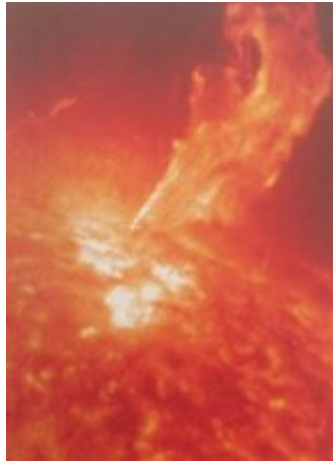

Figure 1: Two hydrogen atoms colliding with each other caused by nuclear fusion in which one of the protons is converted into a neutron. When atoms containing one proton and one neutron collide with hydrogen which has one proton it gives rise to helium which contains two protons and one neutron and a gamma ray of photons.

## **HUMAN IN HELL DOES NOT LIVE AND DO NOT DIE**

Now, humans who are in hell are not alive and not dead because humans who have died emit oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms that come out of their bodies and gather in the afterlife.

So when oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms are in hell which contains hydrogen atoms and helium atoms, then the hydrogen atoms that come from the body of the deceased human collide with other hydrogen atoms and turn into helium atoms.

Well here it means that the hydrogen atom that comes from the human body that dies is not dead and not alive but turns into a helium atom.

So now reveals the secret contained in the verse: *"... He is not dead in it nor (nor) alive. (Thaahaa: 20: 74)*

## **CONCLUSION**

From what is described above we can now conclude that as it is written in the verse: *"...then verily for him is Hell. He does not die in it and does not (also) live. (Thaahaa: 20: 74)*

If we dig deeper *"... He is not dead in it and is not (also) alive. (Thaahaa: 20: 74)*

Why is it that humans who go to hell don't live and don't die?

Because hell contains hydrogen atoms, when two hydrogen atoms collide with each other caused by nuclear fusion where one of the protons is converted into a neutron. In each hydrogen atom consists of a proton and an electron.

Furthermore, when atoms containing one proton and one neutron collide with hydrogen which has one proton it gives birth to helium which contains two protons and one neutron and the most intense it gives rise to gamma rays of photons.

Humans in hell are non-living and immortal because humans who have died emit oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms that come out of their bodies and gather in the afterlife.

When oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms are in hell which contains hydrogen atoms and helium atoms, then the hydrogen atoms that come from the body of the deceased human collide with other hydrogen atoms and turn into helium atoms.

Here it means that the hydrogen atom that comes from the human body that dies is not dead and not alive but turns into a helium atom.

So now reveals the secret contained in the verse: *"... He is not dead in it nor (nor) alive. (Thaahaa: 20: 74)*
