ABSTRACT

Previously, I asked for forgiveness from Allah SWT. Here I am trying to remove the veil that covers the soul associated with behavior and thoughts in the human brain from the point of view of the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

There are several verses in the Al Quran that write down the problems of the soul associated with the behavior and thoughts in the human brain, namely the verses of the verse:

"Then Allah inspires the soul (the way) of wickedness and piety. (Asy Shams: 91: 8)

"O calm soul. (Al Fajr: 89: 27)

"On this day every soul is rewarded with what he tries to do. No one is harmed today. Indeed, Allah is very quick to reckon. (Al-Mu'min: 40: 17)

"Allah holds the soul (person) when he dies and (holds) the soul (person) who has not died in his sleep; then He holds the soul (person) whom He has ordained for death and He releases other souls until the appointed time. Thus there are signs of God's power for people who think. (Az Zumar: 39: 42)

"And We have decreed against them in it (At Torah) that the soul (is rewarded) with a soul, eyes with eyes, nose with nose, ears with ears, teeth with teeth, and wounds (also) have kisas. Whoever releases (kisas rights, then release that right (to be) a sin redeemer for him. Whoever does not decide the case according to what Allah sent down, then they are the wrongdoers. (Al Maa'idah: 5: 45)

Where in an effort to remove the veil that covers the soul associated with behavior and thoughts in the human brain, I use a device called deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESIS

Here I propose a hypothesis that the soul is the behavior and thoughts in the human brain according to the basis of Deoxyribonucleic acid (DNA).

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information which has a double structure that forms a double helix and which contains polynucleotide macromolecules which are arranged repeatedly from nucleotide polymers. These nucleotides are composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1

phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

BEHAVIOR AND THOUGHTS IN THE BRAIN ARE MUTUAL DEPENDENCE OF ONE OTHER

If we now open the secret that is in the verse: *"... Allah inspires the soul (the way) of its wickedness and piety. (Ash Shams: 91: 8)* and the verse: *" O calm soul. (Al Fajr: 89: 27)* and verse: *"Allah holds the soul (person) when he dies and (holds) the soul (person) who has not died in his sleep; ..."* (Az Zumar: 39: 42)

Now it is clearly illustrated to us that this soul is the behavior and thoughts that exist in the human brain. It is through this line of thought that humans will receive all information, knowledge, lessons that come from outside.

Where all that is received through this thought line is displayed in the form of behavior.

Human behavior is a picture of the thoughts that exist in the human brain that have resided in the memories stored in the hippocampus.

So the behavior and thoughts in the brain are interdependent on one another.

THE SOUL IS AN IMAGE OF THE THOUGHT THAT IS IN THE HUMAN BRAIN

Where the soul is a picture of the thoughts that exist in the human brain that have resided in the memories stored in the hippocampus revealed in the verses of the verse: *"... Allah inspires the soul (the way) of its wickedness and piety. (Ash Shams: 91: 8)* *"...holding the soul (person) when he dies and (holding) the soul (person) who has not died in his sleep; ..."* (Az Zumar: 39: 42)

So in fact the soul is a picture of the thoughts that exist in the human brain that have resided in the memories stored in the hippocampus.

WHEN HUMAN DEAD IS AFTER ALL BRAIN FUNCTIONS ARE DEAD AND THE HEART RATE HAS STOPPED

When all the functions of the brain in which there is a thought have died and the heartbeat has stopped, this is the secret in the verse: *"He endures the soul (of the person) whom He has ordained death ..."* (Az Zumar: 39: 42)

So a dead soul is when all brain functions in which there is a thought have died and the heartbeat has stopped.

CONCLUSION

Based on the description above, we can conclude that the soul is the behavior and thoughts that exist in the human brain.

It is through this line of thought that humans will receive all information, knowledge, lessons that come from outside.

Where all that is received through this thought line is displayed in the form of behavior.

Human behavior is a picture of the thoughts that exist in the human brain that have resided in the memories stored in the hippocampus.

When all brain functions in which there is a thought have died and the heartbeat has stopped, this is the secret in the verse: *"He endures the soul (of the person) whom He has ordained death ... (Az Zumar: 39: 42)*

So a dead soul is when all brain functions in which there is a thought have died and the heartbeat has stopped.
