ABSTRACT

Before I wrote about Allah's secret issue about throwing shaytan, I first asked Allah SWT for forgiveness. Here I try to open the veil that covers Allah's secret about throwing Satan from the point of view of the molecular structure of deoxyribonucleic acid (DNA).

There is one verse that is a tool for opening Allah's secret about throwing this shaman, namely the verse:

"Surely We have decorated the sky near the stars, and We have made the stars throwing tools for Satan, and We provide for them the torments of a fiery hell. (Al Mulk: 67: 5)

"And thus We made for each prophet an enemy, namely shaitan (of) human kind and (and kind) jinn, some of them whispered beautiful words to deceive (humans). Your Lord wills, surely they will not do it, so leave them and what they have made up (Al An'aam: 6: 112)

In an attempt to unmask the cover of Allah's secret about throwing evil, I use the basis of deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESIS

Here I propose the hypothesis that Satan was given a hydrogen atom so it disappears from a basic point of view of Deoxyribonucleic acid (DNA)

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information which has a double structure that forms a double helix and which contains polynucleotide macromolecules which are arranged repeatedly from nucleotide polymers. These nucleotides are composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

SATAN IS FORMED FROM OXYGEN ATOMIC

Let us together uncover what is behind the verse: "... *We made the stars throwing tools for Satan, ... (Al Mulk: 67: 5)* Then we also examine the verse: "... *namely shaitan (from) human kind ... (Al An'aam: 6: 112)* then we break down the verse: "... *Satan. He is from the jinn, ..." (Al Kahf: 18:50)* and we dig it up. more in verse: "*And We have created the jinn before (Adam) from a very hot fire" (Al Hijr: 15:27)*

It turns out now that the devil, Satan and the jinn are formed from oxygen atoms. Why?

Because the jinn, demons and Satanists were created by Allah "... *from a very hot fire*" (*Al Hijr: 15:27*)

Based on the molecular structure of nucleic acids which contain nitrogenous bases, we can observe that the oxygen atom or what is called an acid is a colorless, odorless and tasteless gas. Where oxygen combines with most of the other elements to form oxides. This oxygen is also very important for plants, animals and humans. But this oxygen can cause fire through oxidation, for example in the presence of flammable materials and in the presence of friction. Oxygen is very easily oxidized with other atoms, for example the result of oxidation between oxygen atoms and hydrogen atoms is water.

So this demonic secret was opened, namely "... *a very hot fire ...*" (*Al Hijr: 15:27*) illustrates that actually behind the hot fire is hidden the element of the oxygen atom which is very easily oxidized by combustible materials and in the presence of friction.

Therefore, in the presence of the element oxygen, combustible material and the result of friction, a hot fire will arise.

This is the veil behind the letter "... *a very hot fire ...*" (*Al Hijr: 15:27*)

So in the devil's body, Satan and the jinn contain oxygen atoms

SATAN, DEVIL AND JIN ARE HUMAN SHAPES AND ARE IN HUMAN SELF

Then we uncover again the secret behind the verse: "... *namely the shaitan (of) human kind ...*" (*Al An'aam: 6: 112*)

Now it is increasingly clear that the devil is a human. This means that in humans there is evil Then we also dismantle the verse: "... *We made the stars throwing tools for the devil, ..*" (*Al Mulk: 67: 5*)

So the secret that covers the verse has been unearthed: "... *the stars are tools for throwing shaitan, ..*" (*Al Mulk: 67: 5*)

This means that the star contains hydrogen atoms, so by throwing hydrogen atoms into oxygen atoms it becomes water. In other words, the oxygen atom is very easily oxidized with other atoms, for example the result of oxidation between the oxygen atom and the two hydrogen atoms is water.

So to destroy the devil is to use hydrogen atoms. This means that if the oxygen atom is combined with two hydrogen atoms it becomes water. So the devil does not move.

This is Allah's secret about throwing Satan with a star containing hydrogen atoms, which is the joining of two hydrogen atoms with one oxygen atom.

CONCLUSION

Based on the description above, we can conclude that Satan, Satan and the jinn are formed from oxygen atoms. Where the jinn, demons and Satanists were created by Allah "... *from a very hot fire*" (*Al Hijr: 15:27*)

Based on the molecular structure of nucleic acids which contain nitrogenous bases, we can observe that the oxygen atom or what is called an acid is a colorless, odorless and tasteless gas. Where oxygen combines with most of the other elements to form oxides.

This oxygen is also very important for plants, animals and humans. But this oxygen can cause fire through oxidation, for example in the presence of flammable materials and in the presence of friction.

Oxygen is very easily oxidized with other atoms, for example the result of oxidation between oxygen atoms and hydrogen atoms is water.

Inside that star contains hydrogen atoms, so by throwing hydrogen atoms into oxygen atoms it becomes water. In other words, the oxygen atom is very easily oxidized with other atoms, for example the result of oxidation between the oxygen atom and the two hydrogen atoms is water.

To destroy the devil is to use hydrogen atoms. This means that if the oxygen atom is combined with two hydrogen atoms it becomes water.

Because Satan is a human being, which means that in humans there is Satan, Satan will not move if we eat vegetables, drink water, in which there are hydrogen atoms. This is Allah's secret about throwing Satan with a star containing hydrogen atoms, which is the joining of two hydrogen atoms with one oxygen atom.
