ABSTRACT

First, by asking forgiveness from Allah SWT, here I am trying to reveal the signs of the greatness of Allah SWT regarding why Allah knows secrets in heaven and earth and human secrets based on the molecular structure of nucleic acid or deoxyribonucleic acid (DNA)

In the Koran, several verses are found which are the key to unlocking the secrets of why Allah knows the secrets of the heavens and the earth and the secrets of mankind, namely the following verses:

"Say:" Al Quran was sent down by (Allah) who knows the secrets of the heavens and the earth. Indeed, He is Most Forgiving, Most Merciful. "(Al Furqaan: 25: 6) "They do not know that Allah knows their secrets and whispers, and that Allah knows very well all that is unseen. (At Taubah: 9: 78)

In an effort to uncover why Allah knows the secrets of heaven and earth and the secrets of mankind, the author based on deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESIS

Here I propose a hypothesis that Allah's particles consist of carbon atoms, nitrogen atoms, oxygen atoms and hydrogen atoms when viewed from the point of view of Deoxyribonucleic acid (DNA).

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information which has a double structure that forms a double helix and which contains polynucleotide macromolecules that are arranged repeatedly from nucleotide polymers. These nucleotides are composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

ALLAH'S PARTICLE CONSISTS OF OXYGEN ATOMES, NITROGEN ATOMES, CARBON ATOMES AND HYDROGEN ATOMES

Let us unravel the secret behind the verse: ***"... (Allah) who knows the secrets of the heavens and the earth ..."*** (Al Furqaan: 25: 6)

Now we examine to the ***"... secrets in the heavens and on earth ..."*** (Al Furqaan: 25: 6)

Why does Allah know the secrets in the heavens and the earth?

Because what is in the heavens and on earth are the same particles as the particles that exist in the being of Allah. Namely particle particles in the form of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

So because the particles in the sky and on earth are the same as the particles that exist in the form of Allah, Allah immediately knows the secrets that are in the heavens and on earth. Where the particles of Allah are what "*... blow into her womb a part of our spirit (creation), ... (At Tahrim: 66: 12)* These particles or spirit particles are composed of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

ALLAH'S PARTICLE IS THE SAME PARTICLE OF HUMAN PARTICLE

Then we dig and uncover the secret behind the verse: "*... Allah knows their secrets and whispers, ... (At Taubah: 9: 78)*

Now, because humans are made up of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms just like Allah's particles in the form of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms, then clearly and clearly Allah knows all the secrets that exist within human.

Then because oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms cannot be seen by human eyes, this is what is hidden behind the verse "*... Allah knows very well everything that is unseen. (At Taubah: 9: 78)*

Everything that cannot be seen by human eyesight is called "*unseen*", but Allah knows these "*unseen*" things.

Now revealed the secrets hidden in the verse "*... Allah knows very well all that is unseen. (At Taubah: 9: 78)* and "*... Allah knows their secrets and their whispers, ... (At Taubah: 9: 78)*

CONCLUSION

Based on the description above, we can conclude that Allah knows secrets in the heavens and on earth.

What is in the heavens and on earth are the same particles as the particles that exist in the being of Allah. Namely particle particles in the form of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

So because the particles in the sky and on earth are the same as the particles that exist in the form of Allah, Allah immediately knows the secrets that are in the heavens and on earth.

Where the particles of Allah are what "*... blow into her womb a part of our spirit (creation), ... (At Tahrim: 66: 12)*

These particles or spirit particles are composed of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

Humans are made up of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms just like Allah's particles in the form of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms, so clearly and clearly Allah knows all the secrets that exist within
