## **ABSTRACT**

First of all, by asking forgiveness from Allah SWT, here I try to reveal the signs of the greatness of Allah SWT regarding Allah's secret about what the human soul is from the point of view of the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

The signs of the greatness of Allah SWT about what the human soul is in the verses:

*"Allah holds the soul (of people) when they die and (holds) the souls (of people) who have not died in their sleep; then He holds the soul (of people) for whom He has appointed death and He releases another soul until the appointed time. Thus there are signs of Allah's power for a people who think.(Az Zumar: 39: 42)*

In an effort to unveil the greatness of Allah SWT regarding Allah's secret about what the human soul is, I use the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

## **HYPOTHESIS**

Here I propose the hypothesis that the soul is a behavior that is controlled by the human brain seen from the molecular structure of nucleic acids or deoxyribonucleic acid (DNA).

## **DEOXYRIBONUCLEIC ACID (DNA)**

DNA is a repository of genetic information that has a double structure that forms a double helix and which contains polynucleotide macromolecules that are arranged repeatedly from nucleotide polymers. This nucleotide is composed of folate, a 5 carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T). Guanine (G) is composed of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms.

Adenine(A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5 carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

Based on deoxyribonucleic acid (DNA) humans are composed of 32.20% carbon atoms, 25.43% nitrogen atoms, 6.78% oxygen atoms and 35.59% hydrogen atoms. Where carbon, nitrogen, oxygen and hydrogen atoms are widely available around us and in the atmosphere. These atoms are the raw materials for the manufacture of humans, animals, fungi, amoeba, plants, bacteria and archaea.

## **ALLAH HOLDS SOULS, DEAD PEOPLE**

Now we uncover the secret behind the verse: *"Allah holds the soul (of people) when they die... (Az Zumar: 39: 42)*

It turns out that what is meant by the soul is a person's behavior which is controlled by his brain. So,

if someone is held by his soul, it means that the behavior controlled by that person's brain is no longer functioning.

Or in other words the person has died.

Why does Allah use the term "*...holds souls (people) when they die... (Az Zumar: 39: 42)*?"

The answer is

Because the soul is connected to the spirit.

Whereas the spirit itself is an oxygen atom, a hydrogen atom, a nitrogen atom and a carbon atom.

Like the spirit that is breathed in by Allah, it means that the spirit is an oxygen atom, a hydrogen atom, a nitrogen atom and a carbon atom.

So when a human dies, it means that oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms are released from his body.

## **RELEATING SOULS, LETING PEOPLE ALIVE**

Let's continue to uncover the secret behind the verse: "*... He released another soul until the appointed time... (Az Zumar: 39: 42)*"

It turns out that it is also clearly illustrated here, that the soul which is equated with the spirit, shows that the behavior controlled by the person's brain is still functioning.

Or in other words the person is still alive.

So oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms are still present in the person's body.

## **WE HAVE TO USE THE MIND TO UNLOCK ALLAH'S SECRETS**

Now, let's dig deeper into what is behind the verse: "*...Indeed, in that there are signs of Allah's power for a people who think. (Az Zumar: 39: 42)*"

Now, by using our minds, we can reveal the secrets of "*...signs of Allah's power... (Az Zumar: 39: 42)*"

## **CONCLUSION**

Based on the description above, we can conclude that the secret behind the verse: "*Allah holds the soul (of people) when they die... (Az Zumar: 39: 42)*"

It turns out that what is meant by the soul is a person's behavior which is controlled by his brain.

So, if someone is held by his soul, it means that the behavior controlled by that person's brain is no longer functioning.

Or in other words the person has died.

Why does Allah use the term "*...holds souls (people) when they die... (Az Zumar: 39:42)*?"

The answer is Because the soul is connected to the spirit.

Whereas the spirit itself is an oxygen atom, a hydrogen atom, a nitrogen atom and a carbon atom.

Like the spirit that is breathed in by Allah, it means that the spirit is an oxygen atom, a hydrogen atom, a nitrogen atom and a carbon atom.

So when a human dies, it means that oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms are released from his body.

Let's continue to uncover the secret behind the verse: **"... He released another soul until the appointed time... (Az Zumar: 39: 42)**

It turns out that it is also clearly illustrated here, that the soul which is equal with the spirit, shows that the behavior controlled by the person's brain is still functioning.

Or in other words the person is still alive.

So oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms are still present in the person's body.

Now, let's dig deeper into what is behind the verse: **"...Indeed, in that there are signs of Allah's power for a people who think. (Az Zumar: 39: 42)**

Now, by using our minds, we can reveal the secrets of **"...signs of Allah's power... (Az Zumar: 39: 42)**
