**ABSTRACT**

First of all, by asking forgiveness from Allah SWT, here I try to reveal the signs of the greatness of Allah SWT regarding the secret of how long the human spirit is in the grave seen from the point of view of photons, quarks and the molecular structure of nucleic acids or deoxyribonucleic acid (DNA).

Signs of the greatness of Allah SWT regarding how long the human spirit is in the grave is in the verse:

*"Then He put him to death and put him in the grave, ('Abasa: 80:21)*

*"So when I have perfected the event, and have breathed into it my spirit, then submit to it prostrating yourself (Al Hijr: 15: 29)*

*"actually will be collected at a certain time on a known day. (Al Waaqi'ah: 56: 50)*

*"... then We bring out because of the rain various kinds of fruit. That is how We raise the dead..." (Al A'raaf: 7: 57)*

In an effort to unmask the greatness of Allah SWT regarding how long the human spirit is in the grave, I use the basis of photons, quarks and the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

**HYPOTHESIS**

Here I propose the hypothesis that the apocalypse occurs after the sun dies as seen from the photons, quarks and the molecular structure of nucleic acid or deoxyribonucleic acid (DNA)?

**DEOXYRIBONUCLEIC ACID (DNA)**

DNA is a repository of genetic information that has a double structure that forms a double helix and which contains polynucleotide macromolecules arranged repeatedly from nucleotide polymers. This nucleotide is composed of folate, a 5 carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine(A), Cytocine(C) and Thymine (T).

Guanine (G) is composed of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine(A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5 carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

**THE HUMAN SPIRIT COMES FROM HIS BODY THAT HAS BEEN BURIED**

Well, let's continue to reveal the secret behind the verse: *"Then He put him to death and put him in*

*the grave, ('Abasa: 80: 21)*

It turns out that after a person's heart can no longer function, then that person is considered and decided to die.

What happened next to that person's corpse?

Of course we who are still alive *"...put him into the grave, ('Abasa: 80:21)*

## **WHAT IS THE HUMAN SPIRIT**

Now, let's dig deeper to reveal the secret behind the verse: *"...and have breathed into it my spirit,...(Al Hijr: 15: 29)*

It turns out that the spirit of Allah that is breathed into the human body is an oxygen atom, a hydrogen atom, a nitrogen atom and a carbon atom.

So the human body contains oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

Or in other words, the human body contains the spirit of Allah.

## **HOW LONG THE HUMAN SPIRIT IS IN THE GRAVE**

Now we reveal the secret hidden behind the verse: *"... will be collected at a certain time on a known day. (Al Waaqi'ah: 56: 50)*

Well, it turns out that only one month the oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms have come out of the body of the person who has been interred.

## **THE PROCESS OUT OF THE HUMAN SPIRIT FROM WITHIN THE GRAVE**

Where the process of removing oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms from the bodies of people who have been buried is as follows:

A few minutes after death, the body temperature drops according to the temperature of the surrounding environment. Where body temperature drops an average of 1.5-2 degrees every hour. The blood in the body begins to cool, freezes, stops, and prevents the muscles from contracting. Every muscle in the body, from the eyelids to the large muscles, becomes inflexible and the joints stay in place, the whole body stiffens. A few minutes after the heart stops, oxygen levels in the body begin to run low, cells self-destruct, caused by the body's enzymes.

Loss of all color, is caused when blood cells start to break away from blood vessels, then gravity pulls them into smaller blood vessels and capillaries. As a result, the color changes in certain areas of the body. Changes in body color occur gradually and in line with the process of separation, green, blue, red, purple and finally black appear.

Putrefaction occurs when blood vessels and tissues are damaged. Gas and fluid build up and bubbles causing the body to become swollen in certain areas. For example, the eyeball is pushed out a little or the tongue slowly starts to come out of the mouth. Then the swelling is most noticeable in the abdomen. Billions of billions of bacteria take part in this process of decaying dead bodies.

The whole body basically becomes liquid, about a month after death, the large organs and vessels within it become solid. When enough fluid has accumulated the body becomes fractured. This is the

breeding ground for billions of billions of bacteria.

In this decomposition process, carbon atoms and oxygen atoms form carbon dioxide or carbon dioxide. Then this carbonic acid is absorbed by plants and converted into oxygen and glucose through the process of photosynthesis with the help of sunlight, water and chloroplasts. Chloroplasts are found in the green parts of plants.

Where glucose is used as food by plants while oxygen is used for food through the respiratory process by humans and animals.

In this process of decay, too, this dead human body turns into ammonia.

Furthermore, this ammonia is converted into nitrite by nitrosoma bacteria. Then the nitrite is converted to nitrate by nitrobacter bacteria.

Finally the nitrate goes through the denitrification process back to nitrogen.

### **THE HUMAN SPIRIT IS IN THE GRAVE FOR NO MORE THAN TWO MONTHS**

Now, let's drain the secret behind the verse: *"...so We bring out various kinds of fruit because of the rain. That is how We raise those who have died..." (Al A'raaf: 7: 57)*

Now revealed the secret of how long the human spirit is in the grave *"...That's how We raise those who have died..." (Al A'raaf: 7: 57)*

It turns out that the human spirit in the form of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms no more than two months has come out of the grave *"... We resurrect those who have died..." (Al A'raaf: 7: 57)*

### **THE HUMAN SPIRIT THAT HAVE COMING OUT FROM THE GRAVE GATHER**

Then we unravel the secret of the verse: *"it will really be collected at a certain time on a known day. (Al Waaqi'ah: 56: 50)*

It turns out that the human spirit that has come out of the grave continues to be collected, and judged before being put into Paradise 'adn

### **PARADISE EXISTS BEFORE THE SUN DIES**

If the sun dies, then there is no more layer of Allah's light to give life in heaven. Without a layer of Allah's light through the sun's rays, heaven would not be possible.

There is only hell, because in hell only hydrogen atoms are burned.

Because of that, actually, people who have died, their spirits are collected and have been judged and decided by Allah to enter paradise, then they enter paradise immediately before the sun dies.

### **CONCLUSION**

From what has been described above we can now conclude that the secret behind the verse: *"Then He put him to death and put him in the grave, ('Abasa: 80: 21)*

It turns out that after a person's heart can no longer function, then that person is considered and

decided to die.

What happened next to that person's corpse?

Of course we who are still alive *"...put him into the grave, ('Abasa: 80:21)*

Now, let's dig deeper to reveal the secret behind the verse: *"...and have breathed into it my spirit,...(Al Hijr: 15: 29)*

It turns out that the spirit of Allah that is breathed into the human body is an oxygen atom, a hydrogen atom, a nitrogen atom and a carbon atom.

So the human body contains oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

Or in other words, the human body contains the spirit of Allah.

Now we reveal the secret hidden behind the verse: *"... will be collected at a certain time on a known day. (Al Waaqi'ah: 56: 50)*

Well, it turns out that only one month the oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms have come out of the body of the person who has been interred.

Where the process of removing oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms from the bodies of people who have been buried is as follows:
