ABSTRACT

First of all, by asking forgiveness from Allah SWT, here I try to reveal the signs of Allah's greatness regarding Allah's secrets about humans, jin and devils are one type based on photons, quarks and the molecular structure of nucleic acids or deoxyribonucleic acid (DNA)

In the Qur'an found several verses that are the key to unlocking the secrets of Allah's secrets about humans, jin and devils are one type of verses:

"And that there are some men among mankind asking for protection from some men among the jin, then the jin add to their sins and mistakes. (Al Jin: 72: 6)

"And verily among us are those who are pious and among us there are (also) those who are not. We are taking different paths. (Al Jin: 72:11)

"And indeed we have tried to know (the secret) of the heavens, so we found it full of strong guard and arrows of fire, (Al Jin: 72: 8)

"And We created the jin before (Adam) from a very hot fire. (Al Hijr: 15: 27)

"Indeed, We have adorned the heavens near the stars, and We have made them instruments of throwing the devil, and We have prepared for them the torment of a blazing Hell. "The devil said: "I am better than him, because You created me from fire, while you created him from clay." (Shaad: 38:76) "... He is from the jin group, ... (Al Kahf: 18:50)

In an effort to unmask about humans, jin and demons, I am basing one type on photons, quarks and deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESIS

Here I propose the hypothesis that humans, jin and demons are one type, made up of oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms when viewed from the point of view of photons, quarks and Deoxyribonucleic acid (DNA)?

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information that has a double structure that forms a double helix and which contains polynucleotide macromolecules that are arranged repeatedly from nucleotide polymers. This nucleotide is composed of folate, a 5 carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T). Guanine (G) is composed of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms.

Adenine(A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5 carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

PHOTON

Photons are elementary particles of the boson type and carriers of electromagnetic interactions.

QUARK

To find out quarks, we consider one of the hydrogen atoms that are the building blocks of the human body, animals, plants and fruits and inanimate objects. Then we open the body of the hydrogen atom, we will find one electron and one proton nucleus.

Then if this proton is split, then we will find two up quarks and one down quark. Where these three quarks are combined with gluons.

JIN AND HUMANS ARE THE SAME CONTAIN OXYGEN ATOM, HYDROGEN ATOM, NITROGEN ATOM AND CARBON ATOM

Now we are jointly exploring the secret behind the verse *"And We created the jinn before (Adam) from a very hot fire. (Al Hijr: 15: 27)*

It turns out that the jinn were created by Allah from a hot fire. Now, based on the molecular structure of nucleic acids containing nitrogenous bases, we can observe that the oxygen atom is a colorless, odorless and tasteless gas.

Where oxygen atoms combine with most other elements to form oxides. This oxygen atom is also very important for plants, animals and humans. But this oxygen atom can cause fire through oxidation, for example in the presence of combustible materials and by friction.

Oxygen atoms are very easy to oxidize with other atoms, for example the result of oxidation between oxygen atoms and hydrogen atoms is water (H₂O).

Uncovering the oxygen in the molecular structure of nucleic acids takes us to the realm where Allah first created the jinn.

VERY HOT FIRE

If we dig deeper into the secret behind the verse *"...a very hot fire..." (Al Hijr: 15:27)*

It was revealed that actually behind the hot fire was hidden oxygen atoms which were very easily oxidized by combustible materials and by friction.

Therefore, in the presence of oxygen, combustible materials and the friction results, a hot fire arises. Now the secret behind the verse is revealed: *"...a very hot fire..." (Al Hijr: 15:27)* namely oxygen atoms

OXYGEN ATOM AND HYDROGEN ATOM FORMING WATER

Furthermore, because the oxygen atom is very easy to oxidize with other atoms, but there are atoms that are the most easily oxidized with oxygen atoms according to the atoms in the molecular structure of nucleic acids, namely hydrogen atoms.

Where the result of oxidation between oxygen atoms with hydrogen atoms is water (H₂O).

HUMANS, JIN AND DEVIL ONE TYPE

Now, it is revealed why the devil from the jinn group stated: *"...I am better than him, because You created me from fire, while you created him from clay." (Shaad: 38:76) "... He(the devil)) is from the group of jin, ... (Al Kahf: 18: 50)*

The devil of the jin class considers and equates himself with water as a result of a combination of oxygen atoms and hydrogen atoms, because water is an element that can give life to all living organisms compared to clay which contains carbon atoms and nitrogen atoms.

Devils and jin do not understand that their bodies contain oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

Or in other words Satan, jin and humans are one type because in their bodies they contain oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

HUMANS ASK FOR PROTECTION OF JIN

We dig the secret behind the verse: *"And that there are some men among humans asking for protection from some men among the jin... (Al Jin: 72: 6)*

Now it is increasingly revealed that between humans and jinn are one kind.

THE STARS SEEN FROM THE EARTH LIKE GRAVEL FOR THROWING

Now let's unravel the secret behind the verse: *"Indeed We have adorned the sky near the stars, and We have made the stars to throw the devil, ... (Al Mulk: 67: 5)*

It turns out that what is meant by *"...the stars are tools to throw the devil,...(Al Mulk: 67: 5)* is because the stars that look like pebbles from the earth are used as symbols to throw Satan and the devil.

Likewise the secret behind the verse: *"and indeed we have tried to know (the secret) of the sky, then we find it full of strong guard and fire arrows, (Al Jin: 72: 8)* here too only as a symbol, because the jin, the devil, Satan and humans are one kind. They can't fly. They only live on our earth today.

The truth is that knowledge of the heavens, earth, planets, stars, moon, galaxies and the universe is not controlled by jinn, devils, devils and humans. It was only after the revelation of the Quran that everything became clear and clear.

So that jin, devils, devils and humans can no longer look for other reasons. *"... then we found it full of strong guard and fire arrows, (Al Jin: 72: 8).*

What is described in the Qur'an is considered by jin, devils, devils and humans as *"...a strong guard and arrows of fire, (Al Jin: 72: 8)*

CONCLUSION

Based on the description above, we can conclude that

Now we are jointly exploring the secret behind the verse *"And We created the jinn before (Adam) from a very hot fire. (Al Hijr: 15: 27)*

It turns out that the jinn were created by Allah from a hot fire. Now, based on the molecular

structure of nucleic acids containing nitrogenous bases, we can observe that the oxygen atom is a colorless, odorless and tasteless gas.

Where oxygen atoms combine with most other elements to form oxides. This oxygen atom is also very important for plants, animals and humans. But this oxygen atom can cause fire through oxidation, for example in the presence of combustible materials and by friction.

Oxygen atoms are very easy to oxidize with other atoms, for example the result of oxidation between oxygen atoms and hydrogen atoms is water (H₂O).

Uncovering the oxygen in the molecular structure of nucleic acids takes us to the realm where Allah first created the jinn.

If we dig deeper into the secret behind the verse **"...a very hot fire..." (Al Hijr: 15:27)**

It was revealed that actually behind the hot fire was hidden oxygen atoms which were very easily oxidized by combustible materials and by friction.

Therefore, in the presence of oxygen, combustible materials and the friction results, a hot fire arises. Now the secret behind the verse is revealed: **"...a very hot fire..." (Al Hijr: 15:27)** namely oxygen atoms

Furthermore, because the oxygen atom is very easy to oxidize with other atoms, but there are atoms that are the most easily oxidized with oxygen atoms according to the atoms in the molecular structure of nucleic acids, namely hydrogen atoms.

Where the result of oxidation between oxygen atoms with hydrogen atoms is water (H₂O).

Now, it is revealed why the devil from the jinn group stated: **"...I am better than him, because You created me from fire, while you created him from clay." (Shaad: 38:76) "... He(the devil) is from the group of jin, ... (Al Kahf: 18: 50)**

The devil of the jin class considers and equates himself with water as a result of a combination of oxygen atoms and hydrogen atoms, because water is an element that can give life to all living organisms compared to clay which contains carbon atoms and nitrogen atoms.

Devils and jin do not understand that their bodies contain oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

Or in other words Satan, jin and humans are one type because in their bodies they contain oxygen atoms, hydrogen atoms, nitrogen atoms and carbon atoms.

We dig the secret behind the verse: **"And that there are some men among humans asking for protection from some men among the jin..." (Al Jin: 72: 6)**

Now it is increasingly revealed that between humans and jinn are one kind.

Now let's unravel the secret behind the verse: **"Indeed We have adorned the sky near the stars, and We have made the stars to throw the devil, ... (Al Mulk: 67: 5)**

It turns out that what is meant by **"...the stars are tools to throw the devil,...(Al Mulk: 67: 5)** is because the stars that look like pebbles from the earth are used as symbols to throw Satan and the devil.

Likewise the secret behind the verse: ***"and indeed we have tried to know (the secret) of the sky, then we find it full of strong guard and fire arrows, (Al Jin: 72: 8)*** here too only as a symbol, because the jin, the devil, Satan and humans are one kind. They can't fly. They only live on our earth today.

The truth is that knowledge of the heavens, earth, planets, stars, moon, galaxies and the universe is not controlled by jinn, devils, devils and humans. It was only after the revelation of the Quran that everything became clear and clear.

So that jin, devils, devils and humans can no longer look for other reasons. ***"... then we found it full of strong guard and fire arrows, (Al Jin: 72: 8).***

What is described in the Qur'an is considered by jin, devils, devils and humans as ***"...a strong guard and arrows of fire, (Al Jin: 72: 8)***
