ABSTRACT

Before I write down the problem, Allah is exalted, but Allah is very near, first I ask forgiveness from Allah SWT. Here I am trying to open the veil that covers the secret of Allah, Most High, but Allah is very close, from the point of view of the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

There are several verses that become Allah's secret unlocking tool about the Most High Allah, but Allah is very close, namely the verses:

"He created the heavens and the earth with right. Allah is exalted above what they associate. (An Nahl: 16:3)

"To Him belongs whatever is in the heavens and what is in the earth. And He is the Most High, the Most Great. (Asy Shuura: 42:4)

"Who knows all that is unseen and visible, the Most Great, the Most High. (Ar Ra'd: 13: 9)

"Salt the name of your Lord Most High (Al A'laa: 87: 1)

"So exalted is Allah the true King, and do not rush to read the Qur'an before it is perfected to reveal it to you, and say: "O my Lord, add to me knowledge." (Thaaha: 20:114)

"So when I have perfected the event and have breathed into it my spirit; then you should fall down prostrating to him." (Shaad: 38: 72)

"And verily We have created man and know what his heart whispers, and We are nearer to him than his jugular vein." (Qaf: 50:16)

"Allah is the light of the heavens and the earth...Light upon light (An Nuur: 24: 35)

In an attempt to unmask Allah's secret about Allah's highness, but Allah is very close, I use the basis of deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESIS

Here I put forward the hypothesis that Allah is supreme, but Allah is very close, because the spirit of Allah that is breathed into humans is seen from the basic point of Deoxyribonucleic acid (DNA).

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information that has a double structure that forms a double helix and which contains polynucleotide macromolecules that are arranged repeatedly from nucleotide polymers. This nucleotide is composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) is composed of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine(A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C)

contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5 carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

HIGH IS BECAUSE ALLAH IS INCOMPARABLE, RULES THE UNIVERSE, KNOWING THE UNSENSE AND THE REAL

Now, we are still focusing on extracting the secret behind the verse: *"Allah is the light of the sky and the earth...Light upon light (An Nuur: 24: 35)*

It turns out that the light of Allah is everywhere, both the unseen light or the invisible light to the human eye, as well as the visible light to the human eye.

So, because Allah's light covers the universe, Allah's light cannot be compared, Allah's light illuminates the universe, and Allah's light is unseen and real.

ALLAH IS ALWAYS HIGH AND NEAR AT ALL

Now, let's unveil the secret behind the verse: *"He created the sky and the earth with right. Exalted is Allah...(An Nahl: 16:3)*

It turns out that here the secret hidden in this verse (*An Nahl: 16: 3*) is the spirit of Allah consisting of carbon atoms, nitrogen atoms, oxygen atoms and hydrogen atoms, in the heavens and on earth.

Where these atoms are the building blocks of the stars, planets, moons and what is in them.

Or in other words Allah is most high and at the same time very close to the human body *"... I breathed into him my spirit... (Shaad: 38: 72) "...and We are closer to him than his jugular vein, (Qaaf: 50:16)*

Well, because Allah is most high and at the same time very close to the human body, then the secret behind the verse was revealed: *"Allah is the light of the heavens and the earth ... Light above the light (An Nuur: 24: 35)*

That is, nothing is hidden from Allah, whatever is in this universe, nor is there in the human body.

So, *"... My spirit... (Shaad: 38: 72)* is what dominates and encompasses this universe.

Or in other words, Allah is most high and at the same time very near.

CONCLUSION

Based on the description above, we can conclude that the secret behind the verse: *"Allah is the light of the sky and the earth...Light upon light (An Nuur: 24: 35)*

It turns out that the light of Allah is everywhere, both the unseen light or the invisible light to the human eye, as well as the visible light to the human eye.

So, because Allah's light covers the universe, Allah's light cannot be compared, Allah's light illuminates the universe, and Allah's light is unseen and real.

Now, let's unveil the secret behind the verse: *"He created the sky and the earth with right. Exalted is*

Allah...(An Nahl: 16:3)

It turns out that here the secret hidden in this verse (*An Nahl: 16: 3*) is the spirit of Allah consisting of carbon atoms, nitrogen atoms, oxygen atoms and hydrogen atoms, in the heavens and on earth.

Where these atoms are the building blocks of the stars, planets, moons and what is in them.

So, "... *My spirit... (Shaad: 38: 72)* is what dominates and encompasses this universe.

Or in other words, Allah is most high and at the same time very near.
