UNLOCKING ALLAH'S SECRET ABOUT SUSTENANCE IN THE SKY, DESTINY ON THE SIDE OF ALLAH AND FATE CAN BE CHANGED

ABSTRACT

Previously, I asked forgiveness from Allah SWT. Here I am trying to open the veil that covers the sustenance in the sky, destiny in the sight of Allah and fate can be changed from the point of view of the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

In the Qur'an there are several verses that I consider to be the key to unlocking the secrets of sustenance in the sky, destiny with Allah and fate that can be changed, namely the following verses:

"And in the sky are (the causes of) your sustenance and there is (also) what was promised to you. (Adz Dzaariyaat: 51: 22)

"Indeed, Allah does not change the condition of a people until they change what is in themselves... (Ar Ra'd: 13:11)

Where in an effort to open the veil that covers the sustenance in the sky, destiny in the sight of Allah and fate can be changed, I use a tool called deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESIS

Here I propose the hypothesis that sustenance must be sought, fate can be changed and destiny has been promised according to the basis of Deoxyribonucleic acid (DNA)

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information that has a double structure that forms a double helix and which contains polynucleotide macromolecules that are arranged repeatedly from nucleotide polymers. This nucleotide is composed of folate, a 5 carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T). Guanine (G) is composed of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms.

Adenine(A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5 carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

SUSTENANCE DOESN'T COME DIRECTLY FROM THE SKY

Well, let's unravel the secret behind the verse: *"And in the sky are (the causes) of your sustenance... (Adz Dzaariyaat: 51: 22)*

It turns out that now it is revealed that there are some oxygen atoms, nitrogen atoms and hydrogen atoms in the sky.

The question now is

Why doesn't sustenance come down directly from the sky?

The answer is

When the water that evaporates from the sea and rivers then rises into the air, after being in the air the water vapor becomes clouds, because the air above the temperature drops, the clouds become water droplets, and so on it rains

Well, this rain is the forerunner of sustenance for humans.

Because of the rain, the soil becomes fertile and grows various plants and plants for human and animal food.

Rice, which is the staple food of most people, is grown on the ground with the help of rainwater.

For most people, rice must be bought, to buy it, there must be money.

Of course people have to make money by working. No money, no rice. Unless you grow your own rice.

So actually sustenance does not come down directly from the sky.

This is the secret behind the verse: *"And in the sky are (the causes) of your sustenance... (Adz Dzaariyaat: 51: 22)*

HUMANS MUST CHANGE YOUR OWN FATE

Then we explore the secret behind the verse: *"... Allah does not change the condition of a people until they change the situation that is in themselves... (Ar Ra'd: 13: 11)*

Now, it is becoming clearer, now it is seen that humans are not just waiting for sustenance from the sky, but must work to change the circumstances of their lives, to change their destiny.

Humans to achieve a good standard of living that is sufficient and appropriate to support themselves and their families, must try their best to change their own circumstances or destiny.

Allah will not change the condition and fate of man as long as man himself does not change it. Allah gives freedom to humans to change their own circumstances and destiny. So

now it depends on humans themselves, whether they want to or not, to change their own circumstances and fate. This is the secret behind the verse: *"... Allah does not change the condition of a people until they change the situation that is in themselves... (Ar Ra'd: 13:11)*

DESTINY PROMISED BY ALLAH

Then we reveal the secret behind the verse: *"...and there is (also) what was promised to you. (Adz Dzaariyaat: 51: 22)*

Well it turns out, what is promised here is a decree and destiny from Allah.

This means that Allah has determined and determined the death and life of humans, animals, plants and everything in this universe.

So as long as humans live, they must change their circumstances and fate for the good of the earth now and the situation in the future.

CONCLUSION

Based on the description above, we can conclude that the secret behind the verse: *"And in the sky are (the causes) of your sustenance... (Adz Dzaariyaat: 51: 22)*

It turns out that now it is revealed that there are some oxygen atoms, nitrogen atoms and hydrogen atoms in the sky.

The question now is

Why doesn't sustenance come down directly from the sky?

The answer is

When the water that evaporates from the sea and rivers then rises into the air, after being in the air the water vapor becomes clouds, because the air above the temperature drops, the clouds become water droplets, and so on it rains

Well, this rain is the forerunner of sustenance for humans.

Because of the rain, the soil becomes fertile and grows various plants and plants for human and animal food.

Rice, which is the staple food of most people, is grown on the ground with the help of rainwater.
