ABSTRACT

Before the author writes about how Allah's spirit comes out of the body of a dead in the grave, the author first asked Allah SWT for forgiveness. Here the author tries to open the veil covering the secret of how Allah's spirit comes out of the body of a dead in the grave, based on deoxyribonucleic acid (DNA).

There are several verses that reveal Allah's secret about how Allah's spirit comes out of the body of a dead in the grave, namely the verses:

"Did We not make the earth for gathering (Al Mursalaat: 77: 25).

"the living and the dead (Al Mursalaat: 77: 26).

"And indeed We have created human from the essence of the earth. (Al Mu'minuun: 23: 12).

"So when I have perfected the life of Adam and breathed into Adam my spirit, then you will fall down and prostrate to him." (Shaad: 38: 72).

"On the day they came out of their graves as quickly as if they had gone immediately to idols (Al Ma'aarij: 70: 43).

"Read your book, only yourself at this time is your reckoner." (Al Israa': 17: 14).

"those who, when disaster strikes, say: "Inna lillaahi wa innaa ilaihi raaji'uun" (Indeed, we belong to Allah and to Allah we will return) (Al Baqarah: 2: 156).

"...so We brought out various kinds of fruit because of the rain. Like that, We raised the dead..." (Al A'raaf: 7: 57).

In an effort to reveal the greatness of Allah SWT regarding how Allah's spirit comes out of the body of a corpse in the grave, the author uses the basis of deoxyribonucleic acid (DNA).

HYPOTHESES

The author proposes hypothesis about how Allah's spirit comes out of the body of a dead in the grave, based on deoxyribonucleic acid (DNA).

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a storage place for genetic information that has a double structure forms a double helix and contains structured polynucleotide macromolecules repeatedly from nucleotide polymers. This nucleotide consists of folate, a 5 carbon sugar and one of the nitrogen bases. Nitrogen bases are Guanine (G), Adenine(A), Cytocine(C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4

carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. 5 carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

Based on human deoxyribonucleic acid (DNA), it consists of 32.20% carbon atoms, 25.43% nitrogen atoms, 6.78% oxygen atoms and 35.59% hydrogen atoms. Where carbon, nitrogen, oxygen and hydrogen atoms are widely available around us and in the atmosphere.

HOW ALLAH'S SPIRIT COMES OUT OF THE BODY OF A DEAD IN THE GRAVE

So now, we are still concentrating our minds on uncovering the secrets contained behind the verses: *"...We have created human from the essence of the earth. (Al Mu'minuun: 23: 12)"...We made the earth for gathering (Al Mursalaat: 77: 25) "the living and the dead (Al Mursalaat: 77: 26) "...they came out of the grave quickly...(Al Ma'aarij: 70 : 43).*

Apparently, here Allah has declared: *"...We...created human from the essence of the earth. (Al Mu'minuun: 23: 12)"...they came out of their graves quickly...(Al Ma'aarij : 70: 43)"...We made the earth for gathering (Al Mursalaat: 77: 25) "the living and the dead (Al Mursalaat: 77: 26).*

Well, apparently, the earth is where humans are born, where humans live, and where humans die.

So, actually, paradise and hell exist on our earth today. Because *"...the earth for gathering (Al Mursalaat: 77: 25) "the living and the dead (Al Mursalaat: 77: 26).*

Now, what happens to the body of human who die and have been buried in the ground, while the humans who are still alive are busy doing tahlil?

Now, Allah has revealed Allah's secret about *"...We brought out various kinds of fruit because of the rain. Like that, We raised the dead..." (Al A'raaf: 7: 57).*

Well, in reality, a few minutes after a human dies, the body temperature drops according to the temperature of the surrounding environment. Where body temperature drops on average 1.5-2 degrees every hour. The blood in the body begins to become cold, clots, stops, and prevents the muscles from being able to contract. Every muscle in the body, from the eyelids to the large muscles, becomes inflexible and the joints remain in place, the entire body becomes stiff. A few minutes after the heart stops, oxygen levels in the body begin to run low, cells self-destruct, caused by the body's enzymes.

Loss of all color is caused when blood cells begin to break away from the blood vessels, then gravity pulls them into smaller blood vessels and capillaries. As a result, the color changes in certain areas of the body. The changing color of the body occurs gradually and in line with the destruction process in the body, green, blue, red, purple and finally black appear.

Putrefaction occurs when blood vessels and tissue are damaged. Gas and fluid build up and bubble, causing the body to become swollen in certain areas. For example, the eyeballs are pushed out slightly or the tongue slowly comes out of the mouth. Then the swelling is most visible in the abdomen. Billions of billions of bacteria play a role in the process of decomposing a dead body.

The entire body essentially becomes liquid, about a month after death, the organs and large vessels within it become solid. When enough fluid has accumulated the body becomes cracked. This is a breeding ground for billions of billions of bacteria.

In this decay process, carbon atoms and oxygen atoms form carbon dioxide. Then this carbon dioxide is absorbed by plants and converted into oxygen and glucose through the process of photosynthesis with the help of sunlight, water and chloroplasts. Chloroplasts are found in the green parts of plants. Where glucose is used as a food ingredient by plants, while oxygen is used as a food ingredient through the respiratory process by humans and animals.

In this process of decay, the dead human body turns into ammonia.

Next, this ammonia is converted into nitrite by nitrosoma bacteria. Then the nitrite is converted into nitrate by nitrobacter bacteria. Finally, nitrate through the denitrification process turns back into nitrogen and rises into the atmosphere.

Now the picture above is the secret behind the verses: *"...the earth for gathering (Al Mursalaat: 77: 25) "the living and the dead (Al Mursalaat: 77: 26).*

"...Allah's spirit...(Shaad: 38: 72) and the carbon, nitrogen, oxygen and hydrogen atoms which are the building blocks of the dead human body come back out and gather around us and some rise up into the atmosphere.

Meanwhile *"...Allah's spirit...(Shaad: 38: 72)* was built with hydrogen atoms, carbon atoms, nitrogen atoms, oxygen atoms, *"...comes out of the grave quickly...(Al Ma'aarij : 70: 43)* to face Allah and receive Allah's decision *"Read your book, only yourself at this time is your reckoner." (Al Israa': 17: 14).*

So, the image of *"...Allah's spirit...(Shaad: 38: 72)* and the carbon, nitrogen, oxygen and hydrogen atoms which are the building blocks of the dead human body coming back out of the dead human body is what Allah declared in verse: *"...We brought out various kinds of fruit because of the rain. Like that, We raised the dead..." (Al A'raaf: 7: 57).*

This is the secret of Allah, regarding life, death and human life *"...Inna lillaahi wa innaa ilaihi raaji'uun" (Indeed, we belong to Allah and to Allah we will return) (Al Baqarah: 2: 156).*

CONCLUSION

From what is explained above, it can be concluded that the secrets contained behind the verses: *"...We have created human from the essence of the earth. (Al Mu'minuun: 23: 12)"...We made the earth for gathering (Al Mursalaat: 77: 25) "the living and the dead (Al Mursalaat: 77: 26) "...they came out of the grave quickly...(Al Ma'aarij: 70 : 43).*

Apparently, here Allah has declared: *"...We...created human from the essence of the earth. (Al Mu'minuun: 23: 12)"...they came out of their graves quickly...(Al Ma'aarij : 70: 43)"...We made the earth for gathering (Al Mursalaat: 77: 25) "the living and the dead (Al Mursalaat: 77: 26).*

Well, apparently, the earth is where humans are born, where humans live, and where humans die.

So, actually, paradise and hell exist on our earth today. Because *"...the earth for gathering (Al Mursalaat: 77: 25) "the living and the dead (Al Mursalaat: 77: 26).*

Now, what happens to the body of human who die and have been buried in the ground, while the humans who are still alive are busy doing tahlil?

Now, Allah has revealed Allah's secret about *"...We brought out various kinds of fruit because of the rain. Like that, We raised the dead..." (Al A'raaf: 7: 57).*

Well, in reality, a few minutes after a human dies, the body temperature drops according to the temperature of the surrounding environment. Where body temperature drops on average 1.5-2 degrees every hour. The blood in the body begins to become cold, clots, stops, and prevents the muscles from being able to contract. Every muscle in the body, from the eyelids to the large muscles, becomes inflexible and the joints remain in place, the entire body becomes stiff. A few minutes after the heart stops, oxygen levels in the body begin to run low, cells self-destruct, caused by the body's enzymes.

Loss of all color is caused when blood cells begin to break away from the blood vessels, then gravity pulls them into smaller blood vessels and capillaries. As a result, the color changes in certain areas of the body. The changing color of the body occurs gradually and in line with the destruction process in the body, green, blue, red, purple and finally black appear.

Putrefaction occurs when blood vessels and tissue are damaged. Gas and fluid build up and bubble, causing the body to become swollen in certain areas. For example, the eyeballs are pushed out slightly or the tongue slowly comes out of the mouth. Then the swelling is most visible in the abdomen. Billions of billions of bacteria play a role in the process of decomposing a dead body.

The entire body essentially becomes liquid, about a month after death, the organs and large vessels within it become solid. When enough fluid has accumulated the body becomes cracked. This is a breeding ground for billions of billions of bacteria.

In this decay process, carbon atoms and oxygen atoms form carbon dioxide. Then this carbon dioxide is absorbed by plants and converted into oxygen and glucose through the process of photosynthesis with the help of sunlight, water and chloroplasts. Chloroplasts are found in the green parts of plants. Where glucose is used as a food ingredient by plants, while oxygen is used as a food ingredient through the respiratory process by humans and animals.

In this process of decay, the dead human body turns into ammonia.

Next, this ammonia is converted into nitrite by nitrosoma bacteria. Then the nitrite is converted into nitrate by nitrobactor bacteria. Finally, nitrate through the denitrification process turns back into nitrogen and rises into the atmosphere.

Now the picture above is the secret behind the verses: *"...the earth for gathering (Al Mursalaat: 77: 25) "the living and the dead (Al Mursalaat: 77: 26).*

"...Allah's spirit...(Shaad: 38: 72) and the carbon, nitrogen, oxygen and hydrogen atoms which are the building blocks of the dead human body come back out and gather around us and some rise up into the atmosphere.

Meanwhile *"...Allah's spirit...(Shaad: 38: 72)* was built with hydrogen atoms, carbon atoms, nitrogen atoms, oxygen atoms, *"...comes out of the grave quickly...(Al Ma'aarij : 70: 43)* to face Allah and receive Allah's decision *"Read your book, only yourself at this time is your reckoner." (Al Israa': 17: 14).*

So, the image of *"...Allah's spirit...(Shaad: 38: 72)* and the carbon, nitrogen, oxygen and hydrogen atoms which are the building blocks of the dead human body coming back out of the dead human body is what Allah declared in verse: *"...We brought out various kinds of fruit because of the rain. Like that, We raised the dead..." (Al A'raaf: 7: 57).*

This is the secret of Allah, regarding life, death and human life *"... "Inna lillaahi wa innaa ilaihi*

raaji'uun" (Indeed, we belong to Allah and to Allah we will return) (Al Baqarah: 2: 156).
