ABSTRACT

Before the author writes about the heart or qalbu refers to the brain which is controlled by Allah's spirit, most Muslims do not understand, first the author asks forgiveness from Allah SWT. Here the author tries to open the veil that covers the secret about the heart or qalbu refers to the brain which is controlled by Allah's spirit, most Muslims do not understand, based on Deoxyribonucleic acid (DNA).

There are several verses that reveal the secret of Allah about the heart or qalbu refers to the brain which is controlled by Allah's spirit, most Muslims do not understand, namely the verses:

"O you who believe, fulfill the call of Allah and the call of the Messenger when the Messenger calls you to something that gives you life, know that indeed Allah sets a boundary between human and his heart and indeed to Him you will be gathered. (Al Anfaal: 8: 24).

"So when I have perfected the events of Adam and have breathed into Adam My spirit, then you must bow down to him (Shaad: 38: 72).

"O our God, indeed I have placed some of my descendants in a valley which has no vegetation near the house of You who are revered, O our God, so that they can pray, so make the hearts of some people tend to my descendants and give them sustenance from fruits , hopefully they will be grateful (Ibrahim: 14: 37).

"And indeed We made it for (hell) mostly from jinn and humans, they have qalbu, but they are not used to understand and they have eyes they are not used to see , and they have ears they are not used to hear. They are as livestock, they are even more astray. They are the heedless ones.(Al A'raaf: 7: 179).

Where in an effort to open this veil of the heart or qalbu refers to the brain which is controlled by Allah's spirit, most Muslims do not understand, the author use deoxyribonucleic acid.

HIPOTESE

Here I propose hypothesis the heart or qalbu refers to the brain which is controlled by Allah's spirit, based on Deoxyribonucleic acid (DNA)

HYPOTHESIS

Here the author proposes hypothesis the heart or qalbu refers to the brain which is controlled by Allah's spirit, based on Deoxyribonucleic acid (DNA)

PHOTON

Photons are elementary particles of the boson type and carriers of electromagnetic interactions.

QUARKS

If we want to know quarks then we pay attention to one of the hydrogen atoms which is a building element of the human body, animals, plants and fruit as well as inanimate objects. Then we open the body of the hydrogen atom, we will find one electron and one proton nucleus. Next, if this proton is split, we will find two up quarks and one down quark. Where these three quarks are combined with a gluon.

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information which has a double structure that forms a double helix and which contains polynucleotide macromolecules that are arranged of nucleotide polymers. These nucleotides are composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine (A), Cytocine (C) and Thymine (T).

Guanine (G) consists of 5 carbon atoms, 5 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Adenine (A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5 carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

Based on human deoxyribonucleic acid (DNA), it consists of 32.20% carbon atoms, 25.43% nitrogen atoms, 6.78% oxygen atoms and 35.59% hydrogen atoms.

THE HEART OR QALBU REFERS TO THE BRAIN WHICH IS CONTROLLED BY ALLAH'S SPIRIT, MOST MUSLIMS DO NOT UNDERSTAND

Now if we dig deeper, then it will be found that what is actually meant by the heart is the brain as written in the verse: *"... Allah sets a boundary between human and his heart ... (Al Anfaal: 8: 24) "...make the hearts of some people tend to my descendants ..." (Ibrahim: 14: 37) "...they have qalbu, but they are not used to understand ..." (Al A'raaf: 7: 179).*

Based on deoxyribonucleic acid (DNA) humans are composed of 32.20% carbon atoms, 25.43% nitrogen atoms, 6.78% oxygen atoms and 35.59% hydrogen atoms. Where carbon, nitrogen, oxygen and hydrogen atoms are widely available around us and in the atmosphere. These atoms are the raw materials for making humans, animals, fungi, amoeba, plants, bacteria and archaea.

Now we can say that humans are built almost a third of carbon atoms, a quarter of nitrogen atoms, almost a tenth oxygen atoms and more than a third of hydrogen atoms, all of which are available around us, in the soil and in the atmosphere.

Now, if we examine physiologically, the heart is interpreted as the liver which functions as a destroyer of toxins in the blood, produces proteins for blood clotting and helps the digestive process through the production of bile. But psychologically, the liver has no role whatsoever. If the heart is physiologically interpreted as the heart, then the heart is what can determine the life and death of a person. If the heart is still beating, then the person is still alive. But if the heartbeat has disappeared, then the person is dead.

Furthermore, if the heart is interpreted as conscience, then that means the behavior or conduct of that person.

So here is the secret behind the verses "**... Allah sets a boundary between human and his heart...**" (*Al Anfaal: 8: 24*) "**...make the hearts of some people tend to my descendants ...**" (*Ibrahim: 14: 37*) "**...they have qalbu, but they are not used to understand ...**" (*Al A'raaf: 7: 179*) it is revealed that this heart is actually the brain. Where signals from one of the limbs are first sent electronically to the spinal cord. In this spinal cord, nerve cells are connected to the following nerve cells with the help of synapses. Synapses are the points where nerve cells unite and where signals coming from the limbs are converted into chemical transmitters that prepare the following nerve cells to send signals. Furthermore, the signal is sent further in electronic form to the brain.

Furthermore, in the verse "**... Allah sets a boundary between human and his heart...**" (*Al Anfaal: 8: 24*) this illustrates that signals coming from limbs and signals from the brain are filtered. This means that the brain controls and analyzes whether the behavior is good or bad according to the experience gained, one of which is through teaching. For example, as a Muslim who has studied Islam, the tool that controls the person's behavior is the experience gained through studying Islam.

This is the secret behind the verses: "**... Allah sets a boundary between human and his heart...**" (*Al Anfaal: 8: 24*) "**...make the hearts of some people tend to my descendants ...**" (*Ibrahim: 14: 37*) "**...they have qalbu, but they are not used to understand ...**" (*Al A'raaf: 7: 179*) namely what is meant by the heart is the brain.

As for "**...my spirit...(Shaad: 38: 72)** or "**...Allah's spirit...(Shaad: 38: 72)** which is built with hydrogen atoms, carbon atoms, nitrogen atoms, oxygen atoms that form the nervous system are united in the brain "**... Allah sets a boundary between human and his heart...**" (*Al Anfaal: 8: 24*). Meaning "**...my spirit...(Shaad: 38: 72)** or "**...Allah's spirit...(Shaad: 38: 72)** guides the brain, which then the brain based on the guidance of "**...my spirit...(Shaad: 38: 72)** or "**...Allah's spirit...(Shaad: 38: 72)** controls and analyzes whether the behavior is good or bad according to the experience gained, one of which is through teaching.

Now this is still not understood by almost all Muslims in the world.

CONCLUSION

Based on the explanation above, we can conclude that what is actually meant by the heart is the brain as written in the verse: "**... Allah sets a boundary between human and his heart ...**" (*Al Anfaal: 8: 24*) "**...make the hearts of some people tend to my descendants ...**" (*Ibrahim: 14: 37*) "**...they have qalbu, but they are not used to understand ...**" (*Al A'raaf: 7: 179*).

Based on deoxyribonucleic acid (DNA) humans are composed of 32.20% carbon atoms, 25.43% nitrogen atoms, 6.78% oxygen atoms and 35.59% hydrogen atoms. Where carbon, nitrogen, oxygen and hydrogen atoms are widely available around us and in the atmosphere. These atoms are the raw materials for making humans, animals, fungi, amoeba, plants, bacteria and archaea.

Now we can say that humans are built almost a third of carbon atoms, a quarter of nitrogen atoms, almost a tenth oxygen atoms and more than a third of hydrogen atoms, all of which are available around us, in the soil and in the atmosphere.

Now, if we examine physiologically, the heart is interpreted as the liver which functions as a destroyer of toxins in the blood, produces proteins for blood clotting and helps the digestive process through the production of bile. But psychologically, the liver has no role whatsoever. If the heart is physiologically interpreted as the heart, then the heart is what can determine the life and death of a person. If the heart is still beating, then the person is still alive. But if the heartbeat has disappeared,

then the person is dead.

Furthermore, if the heart is interpreted as conscience, then that means the behavior or conduct of that person.

So here is the secret behind the verses "**... Allah sets a boundary between human and his heart...**" (*Al Anfaal: 8: 24*) "**...make the hearts of some people tend to my descendants ...**" (*Ibrahim: 14: 37*) "**...they have qalbu, but they are not used to understand ...**" (*Al A'raaf: 7: 179*) it is revealed that this heart is actually the brain. Where signals from one of the limbs are first sent electronically to the spinal cord. In this spinal cord, nerve cells are connected to the following nerve cells with the help of synapses. Synapses are the points where nerve cells unite and where signals coming from the limbs are converted into chemical transmitters that prepare the following nerve cells to send signals. Furthermore, the signal is sent further in electronic form to the brain.

Furthermore, in the verse "**... Allah sets a boundary between human and his heart...**" (*Al Anfaal: 8: 24*) this illustrates that signals coming from limbs and signals from the brain are filtered. This means that the brain controls and analyzes whether the behavior is good or bad according to the experience gained, one of which is through teaching. For example, as a Muslim who has studied Islam, the tool that controls the person's behavior is the experience gained through studying Islam.

This is the secret behind the verses: "**... Allah sets a boundary between human and his heart...**" (*Al Anfaal: 8: 24*) "**...make the hearts of some people tend to my descendants ...**" (*Ibrahim: 14: 37*) "**...they have qalbu, but they are not used to understand ...**" (*Al A'raaf: 7: 179*) namely what is meant by the heart is the brain.

As for "**...my spirit...(Shaad: 38: 72)** or "**...Allah's spirit...(Shaad: 38: 72)** which is built with hydrogen atoms, carbon atoms, nitrogen atoms, oxygen atoms that form the nervous system are united in the brain "**... Allah sets a boundary between human and his heart...**" (*Al Anfaal: 8: 24*). Meaning "**...my spirit...(Shaad: 38: 72)** or "**...Allah's spirit...(Shaad: 38: 72)** guides the brain, which then the brain based on the guidance of "**...my spirit...(Shaad: 38: 72)** or "**...Allah's spirit...(Shaad: 38: 72)** controls and analyzes whether the behavior is good or bad according to the experience gained, one of which is through teaching.

Now this is still not understood by almost all Muslims in the world.
