ABSTRACT

Before I write down the problem of what Allah really means, Allah's spirit has incarnated into a perfect human being, I first ask forgiveness from Allah SWT. Here I try to open the veil that covers the secret of what Allah really means, Allah's spirit incarnated into a perfect human, based on the molecular structure of nucleic acid or deoxyribonucleic acid (DNA).

There are several verses that become Allah's secret unlocking tool about what Allah really means, Allah's spirit incarnated into a perfect human, namely the verses:

"So when I have perfected the event, and have breathed into it my spirit, then submit to it prostrating yourself (Al Hijr: 15: 29)

"Then He perfected and breathed into it His spirit and He made for you hearing, sight and heart; you are very little grateful. (As Sajdah: 32: 9)

"So he put a veil from them; then We sent our spirit to her, and he before her, incarnated into a perfect human being. (Maryam: 19:17)

"Allah is the light of the skys and the earth...Light upon light...(An Nuur: 24: 35)

In an effort to open the veil of Allah's secret about what Allah really means, Allah's spirit incarnated into a perfect human, I use the basis of deoxyribonucleic acid or deoxyribonucleic acid or the molecular structure of nucleic acids.

HYPOTHESES

Here I propose the hypothesis that Allah's spirit incarnated into a perfect human being, through DNA which is made up of hydrogen atoms, carbon atoms, nitrogen atoms and oxygen atoms, based on Deoxyribonucleic acid (DNA).

DEOXYRIBONUCLEIC ACID (DNA)

DNA is a repository of genetic information that has a double structure that form a double helix and which contains polynucleotide macromolecules arranged in repeatedly from nucleotide polymers. This nucleotide is composed of folate, a 5-carbon sugar and one of the nitrogenous bases. The nitrogenous bases are Guanine (G), Adenine(A), Cytocine(C) and Thymine (T).

Guanine (G) is composed of 5 carbon atoms, 5 nitrogen atoms, 1 atom oxygen and 5 hydrogen atoms. Adenine(A) has 5 carbon atoms, 5 nitrogen atoms and 5 hydrogen atoms. Cytocine (C) contains 4 carbon atoms, 3 nitrogen atoms, 1 oxygen atom and 5 hydrogen atoms. Thymine (T) contains 5 carbon atoms, 2 nitrogen atoms, 2 oxygen atoms and 6 hydrogen atoms. Folate contains 1 phosphorus atom, 4 oxygen atoms and 2 hydrogen atoms. The 5-carbon sugar has 5 carbon atoms, 2 oxygen atoms and 8 hydrogen atoms.

HOW DOES THE SPIRIT OF ALLAH INCARNATED INTO A PERFECT HUMAN

Now, we are still trying to focus our minds to reveal the secret hidden behind the verse: *"... We sent our spirit to him, so he before her, incarnated into a perfect human being(Maryam: 19:17)*

Apparently, here, Allah has declared *"...Our spirit...(Maryam: 19:17)*

What exactly is meant by Allah *"...Our spirit...(Maryam: 19:17) ?*

The answer is hidden in the secret behind the verse: *"... He... breathed into it His spirit... He made for you hearing, sight and heart... (As Sajdah: 32: 9)*

Well, apparently what Allah meant was *"...Our spirit...(Maryam: 19:17)* is what Allah breathed into the mother's womb. It means *"...Our spirit...(Maryam: 19:17)* which in the form of deoxyribonucleic acid (DNA)

So, actually, Allah's intention by declaring *"...Our spirit...incarnated into...a perfect human being. (Maryam: 19:17)* is *"...spirit...(Maryam: 19:17)* of Allah which is in the form of DNA, which is in the sperm from the father's side and in the egg from the mother, united in the mother's womb, which becomes a fetus, continues to grow into a baby, then is born into a perfect human.

CONCLUSION

Based on the description above, we can conclude that the secret hidden behind the verse: *"... We sent our spirit to him, so he before her, incarnated into a perfect human being(Maryam: 19:17)*

Apparently, here, Allah has declared *"...Our spirit...(Maryam: 19:17)*
